Summary

Site reliability and cloud infrastructure engineer with experience in production operations, consulting, and multi-tenant **AWS** at scale (**70+ Amazon EKS clusters**, **250+ tenants**). Strong in **Terraform**, **Kubernetes (EKS)**, **GitLab CI/CD**, **Python/Bash**, and observability (**Prometheus**, **Grafana**, **Synthetic Monitoring**, **CloudWatch**). Owns end-to-end platform domains (**VPC**, identity, data paths, containers), partners with engineering and security, documents for handoff, and reduces toil through IaC and repeatable pipelines.

Experience

IQVIA — Dhaka, Bangladesh

Product Site Reliability Engineer — *June 2024 – Present, Full-time*

- Own **Orchestrated Analytics (OA)** platform (SaaS & Agentic) infrastructure on **AWS**: 250+ tenants across 70+ **Amazon EKS** clusters across environments; reliability and performance for regulated life-sciences workloads.
- Drive **Infrastructure as Code** and automation with **Terraform**, **Helm**, **Kubernetes**, **Docker**, **GitLab CI/CD**, **Python**, and **Bash**, with repeatable changes, peer review, and runbooks aligned with compliance and organizational standards.
- Operate AWS foundations for the platform: **VPC** networking, **IAM** and access patterns, load balancing and **Route 53** DNS patterns, **security groups**, and encrypted data paths; integrate with managed data services such as **Amazon RDS/Aurora** and **S3** where applicable to the OA stack.
- **On-call and incident leadership**: proactive monitoring (**Prometheus**, **Grafana**, **CloudWatch**, **Alertmanager**, **Synthetic Monitoring**), rapid triage, coordination with developers and stakeholders, and follow-ups to reduce recurrence.
- **Reliability engineering**: actionable, customer-impacting signals; support SLO-oriented monitoring where the product defines SLIs (alongside agreed SLAs where required).
- **AI/ML platform**: provisioned and operate the agentic infrastructure on AWS — **Amazon Bedrock** models, **Knowledge Bases** (RAG), and the runtime environment hosting AI agents and **MCP servers**; self-hosted **LangSmith** for end-to-end agent tracing and observability.
- **Cost and capacity**: right-sizing, workload consolidation, and migration initiatives to optimize cloud spend without compromising availability.
- **Documentation**: procedures, incidents, and automation written for handoff, auditability, and developer-friendly operational guidance.

PricewaterhouseCoopers (PwC) — Dhaka, Bangladesh

Senior Consultant (Infrastructure and DevOps) — *June 2022 – June 2024, Full-time*

- Delivered cloud infrastructure and DevOps consulting: assessments, architecture guidance, and proofs of concept across the engagement lifecycle.
- Designed, built, and operated scalable infrastructure on **AWS**, **Azure**, and **OCI** with **Terraform** IaC; met high availability, performance, and security requirements for client environments.
- Implemented container-based microservices platforms using **Docker** and **Kubernetes** (including **AKS**-class delivery) with CI/CD via **Azure DevOps** and **GitHub Actions**.
- Performed root cause analysis and incident mitigation; automated repetitive work and improved operational accuracy.

Unique Infoway Limited — Dhaka, Bangladesh

Senior System Engineer — *Dec 2019 – May 2022, Full-time*

Network Operations Center Engineer — *Dec 2015 – Dec 2019, Full-time*

- Built and ran on-premises infrastructure and NOC operations: deployment, monitoring, incident response, upgrades, and security collaboration; foundation for later cloud-scale production discipline.

Key Skills

Disciplines: Agile, DevOps, Infrastructure Engineering, Site Reliability Engineering, GitOps

Languages: Bash/Shell, Python, YAML

Cloud (AWS focus): Amazon Web Services; Azure; Oracle Cloud Infrastructure

AI/ML & Agents: Amazon Bedrock (models, Knowledge Bases, RAG), MCP servers, LangSmith (self-hosted)

Containers: Docker, Kubernetes (EKS, AKS), OpenShift

Infrastructure as Code: Terraform, Helm, Kustomize, Packer

CI/CD: GitLab CI/CD, GitHub Actions, Azure DevOps, AWS CodeBuild

Observability: Prometheus, Grafana, CloudWatch, Alertmanager, Synthetic Monitoring

Education

Primeasia University — Dhaka, Bangladesh

B.Sc. in Electrical and Electronics Engineering — *Sep 2014*

Certificates

AZ-104: Microsoft Azure Administrator — *Expires on: September, 2026*
